@kpshek

The problem with SMART apps

Bilirubin Chart

Newborns < 120 hours old

Bilirubin results that are either:

- Not documented

- Outside of the accepted range

The user needs to know the app is **available**

The user needs to know the app is **relevant**

The user has to **find** the app and launch it

CDS HOOKS

CDS Hooks

A vendor agnostic remote decision support specification

Created by the team
behind SMART

Open source (Apache)

Emerging standard with
active development and
widespread participation
from stakeholders

CDS Service

A service that is:

invoked by the EHR via a **hook**,
evaluates **its own logic** using FHIR data,
returns decision support via **cards**

Example Hooks

patient-view

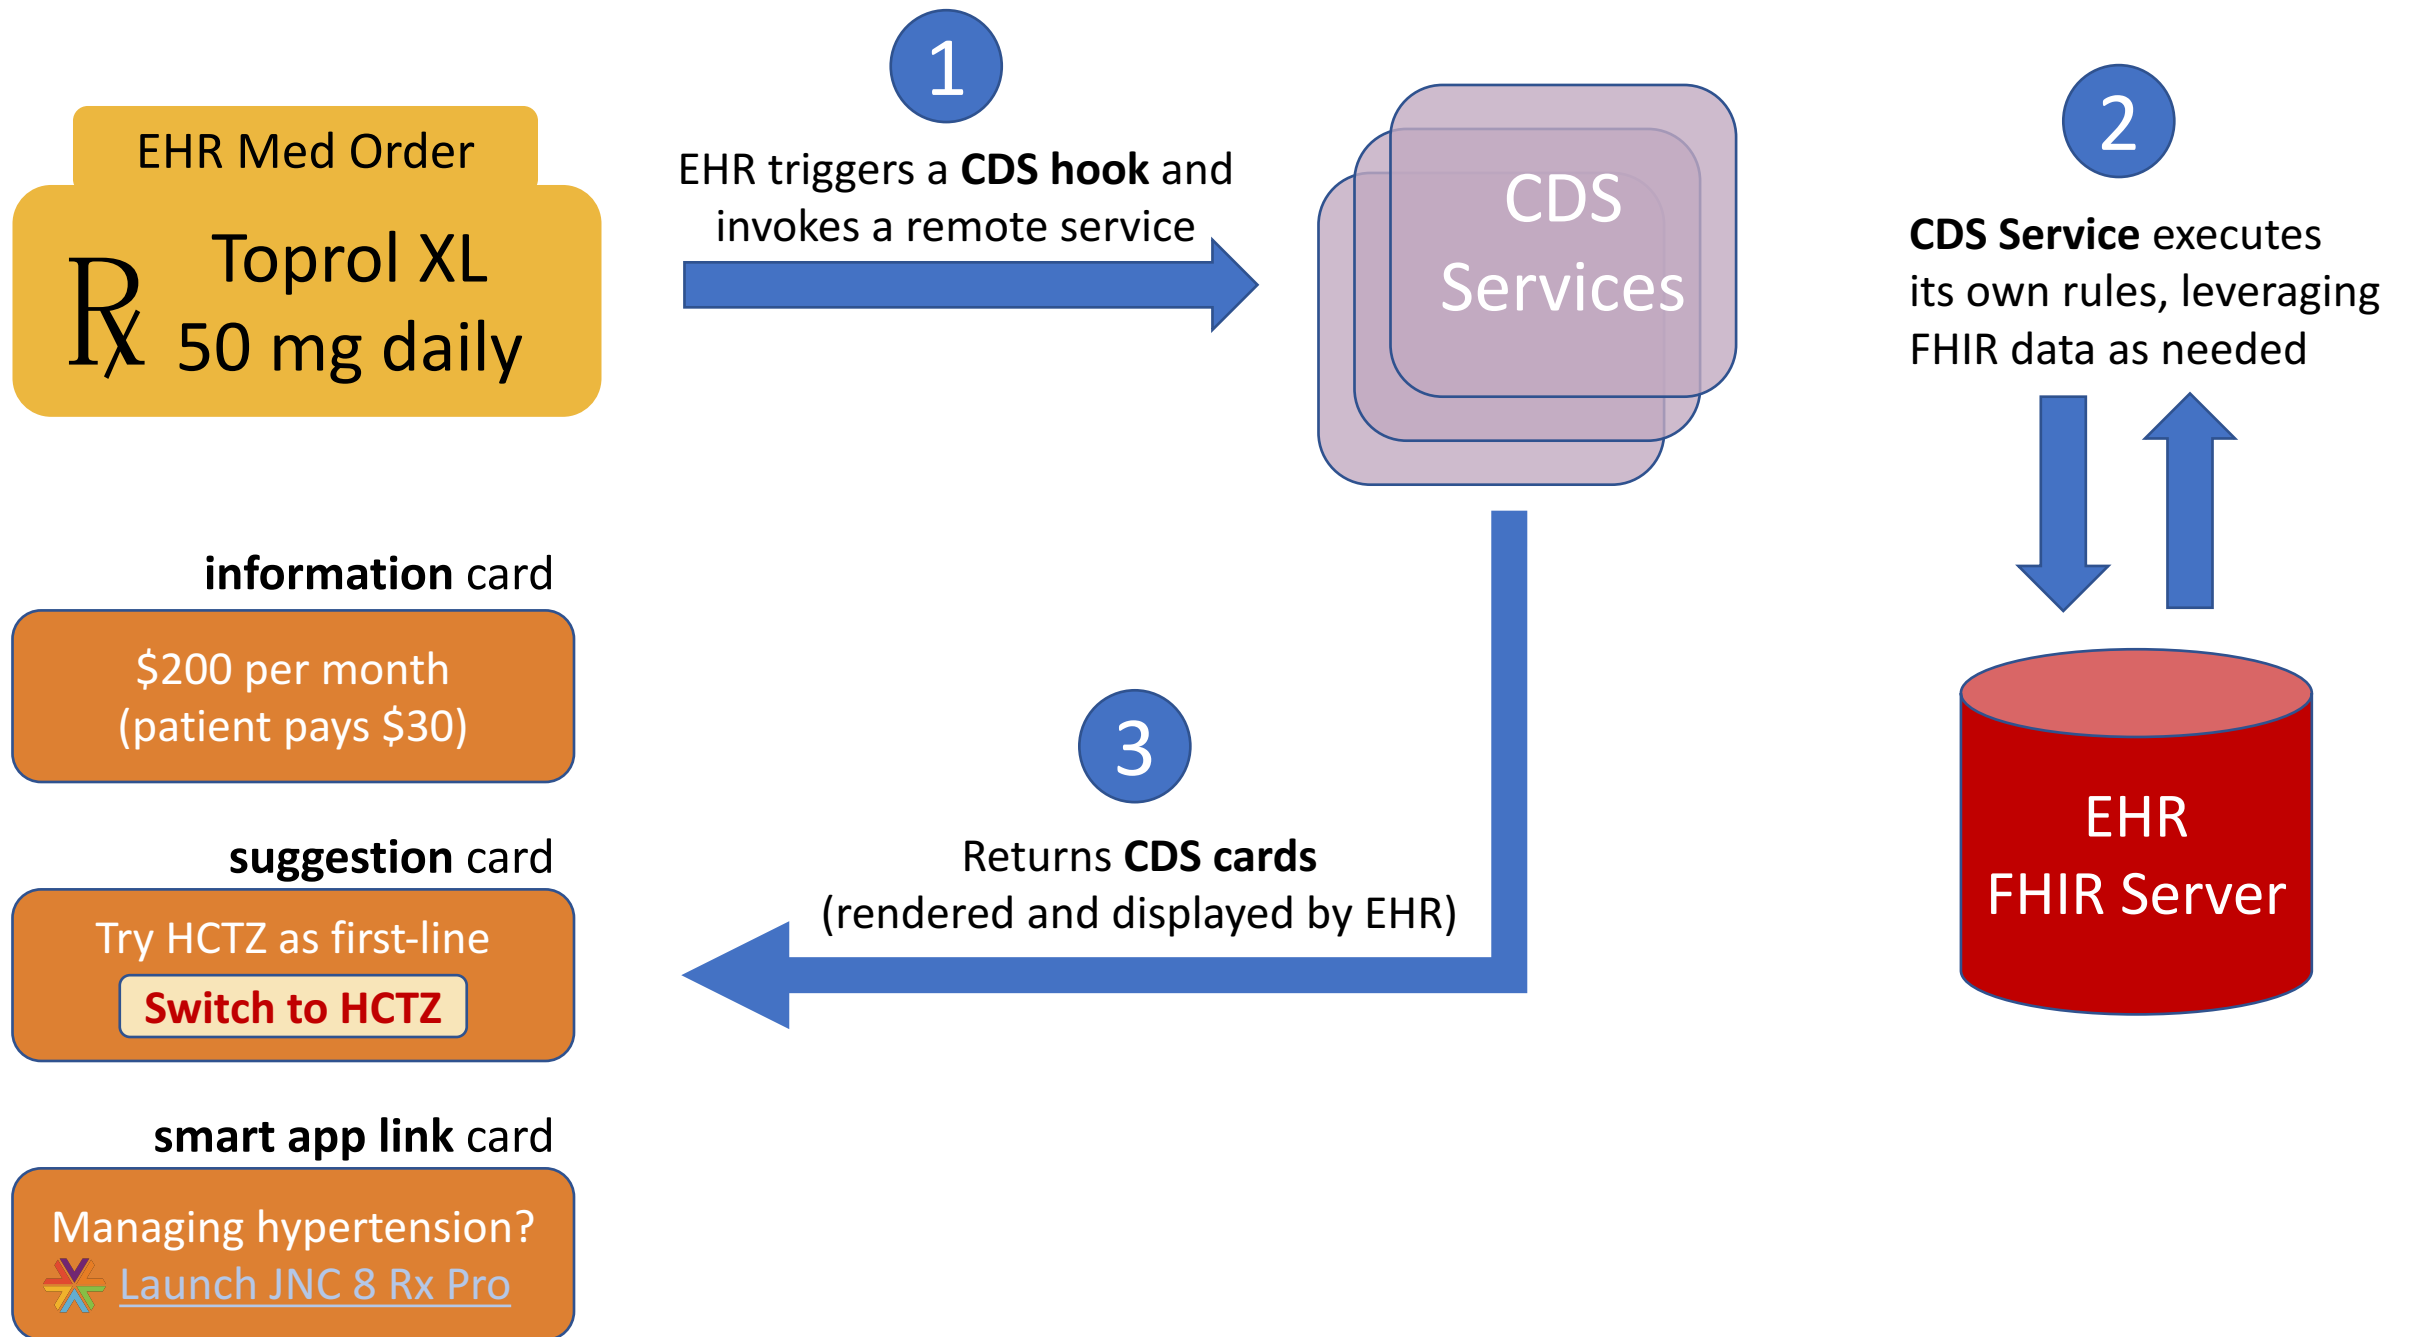

When a patient's chart is opened

medication-prescribe

When a medication is selected for prescription

order-review

Viewing pending orders for signing

EHR

CDS Service

POST <https://example.com/cds-services/example-service>

```
{  
  "hook": "patient-view",  
  "fhirServer": "https://fhir.example.com",  
  "user": "Practitioner/789",  
  "patient": "123",  
  "encounter": "456",  
  ...  
}
```

POST <https://example.com/cds-services/example-service>

EHR

CDS Service

POST <https://example.com/cds-services/example-service>

HTTP 1.1/ 200 OK

```
{  
  "cards": [  
    {  
      "summary": "Example card",  
      "indicator": "info",  
      "source": {  
        "name": "Demo CDS Service"  
      }  
    }  
  ]  
}
```

Cards

- A CDS Service can return any number of cards
- The EHR renders each card as it sees fit
- Each card must have:
 - A concise summary (140 characters)
 - An indicator noting the importance of the card
 - Information on the organization or data set that is the source of the card's data

CDS Service Response JSON

```
{  
  "cards": [  
    {  
      "summary": "Example card",  
      "indicator": "info",  
      "source": {  
        "name": "Demo CDS Service"  
      }  
    }  
  ]  
}
```

Card Indicator

Informational

Warning

Hard Stop

Common Card Examples

Information Only

Textual information for the provider

Medication Information

ADRA2A (C/C): The genotype of this patient suggests a reduced response to certain ADHD medications.

Source: [RxCheck](#)

Suggestions

Proposed actions encoded as FHIR resources

Medication Alert for lisinopril 5 mg tablet

This medication is not recommended for Black or African American patients.

82% of providers selected this recommendation.

[Switch to amiloride 5 mg-hydrochlorothiazide 50 mg tablet](#)

Source: [RxCheck](#)

App Links

Proposed SMART app that should be used

ASCVD Risk Alert

12% 10-year risk

69% lifetime risk

Source: [Demo CDS Service](#)

[ASCVD Risk Calculator](#)

Cards can contain any combination of information, suggestions, and links

Medication Alert

Source: RxCheck

lisinopril 5 mg tablet

- This medication is not recommended for Black or African American patients.

82% of providers selected this recommendation.

[Switch to amiloride 5 mg-hydrochlorothiazide 50 mg tablet](#)

[Medication Review](#)

Capturing user behavior for analytics

- Since CDS Services return purely JSON, they don't know how users interact with their suggestion
- Each suggestion *may* contain a **UUID**
- The UUID allows the EHR to notify the CDS Service that the user interacted with their suggestion

```
POST {cds-service}/analytics/{uuid}
```

Base https://example.com

Discovery /cds-services

Service /cds-services/{id}

Discovery

GET <https://example.com/cds-services>

```
{
  "services": [
    {
      "hook": "patient-view",
      "name": "CDS Service Example",
      "description": "An example CDS service",
      "id": "example-service",
      "prefetch": {
        "patientToGreet": "Patient/{{Patient.id}}"
      }
    },
    { ... }
  ]
}
```

CDS Service Invocation

```
{  
  "services": [  
    {  
      "hook": "patient-view",  
      "name": "CDS Service Example",  
      "description": "An example CDS service",  
      "id": "example-service",  
    }  
  ]  
}
```

CLINICAL APPLICATIONS, MESSAGING AND INTEGRATION

2017 Resolutions

Release a 1.0 specification

Launch production pilots

Argonauts ❤️ CDS Hooks

The EHR invokes a CDS service via a patient-view hook, resulting in a SMART app link card that the clinician uses to launch the SMART app.

Validate and implement the CDS Hooks security model

What's after 1.0?

Performance: trigger guards, SLAs

Event & time based hooks

Specific use cases
(ACR ordering guidelines, CDC opioid guidelines, etc)
