# SMARTER CARE

# Building Personnel and Organizations

October 9<sup>th</sup>, 2018

*Justin Knysz, Senior Interface Architect*

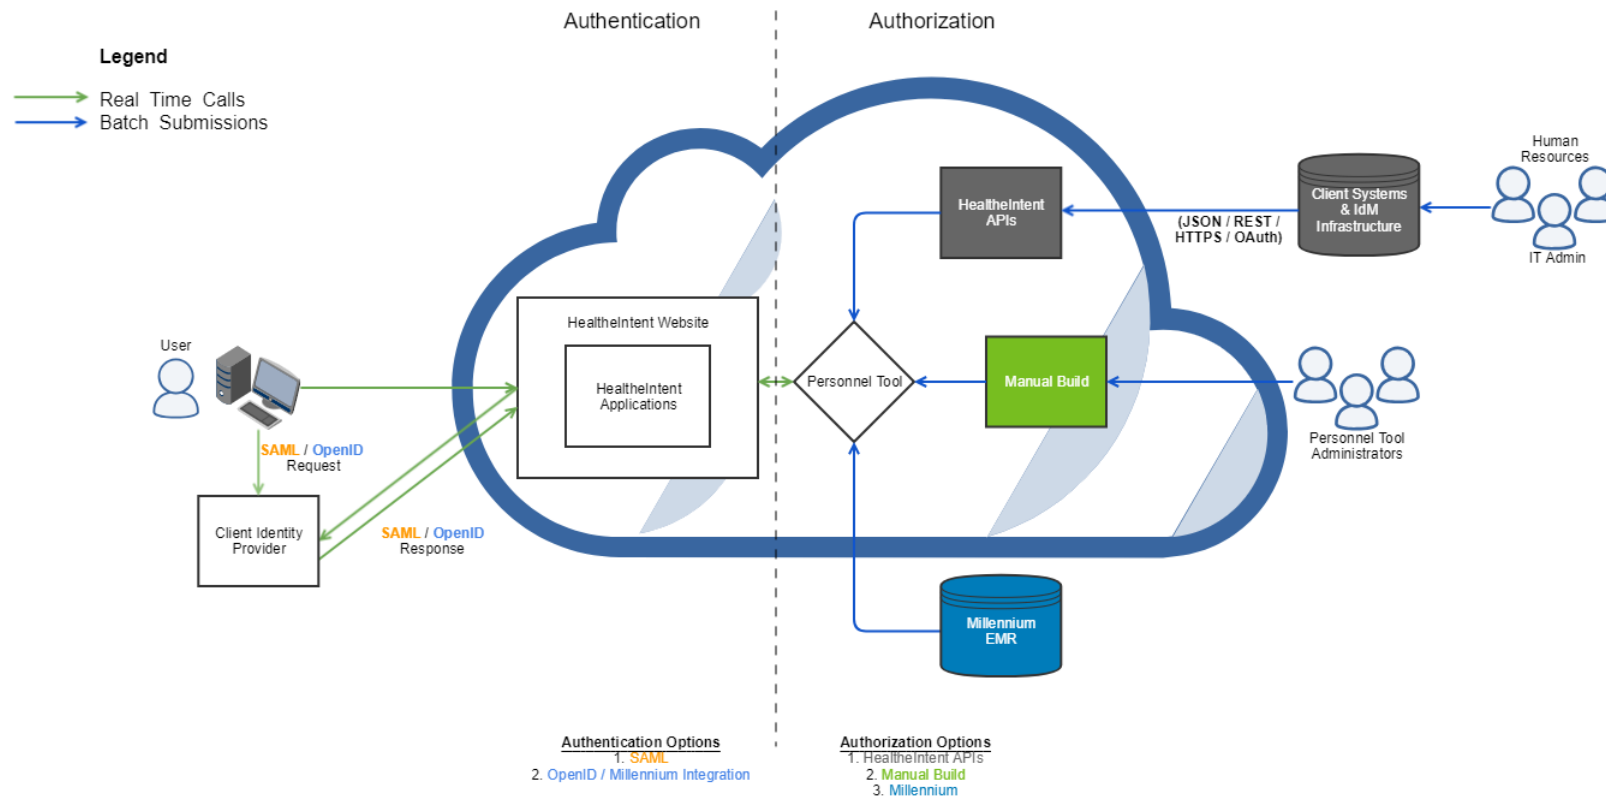

*Jessi Sullivan, Senior Interface Engineer*

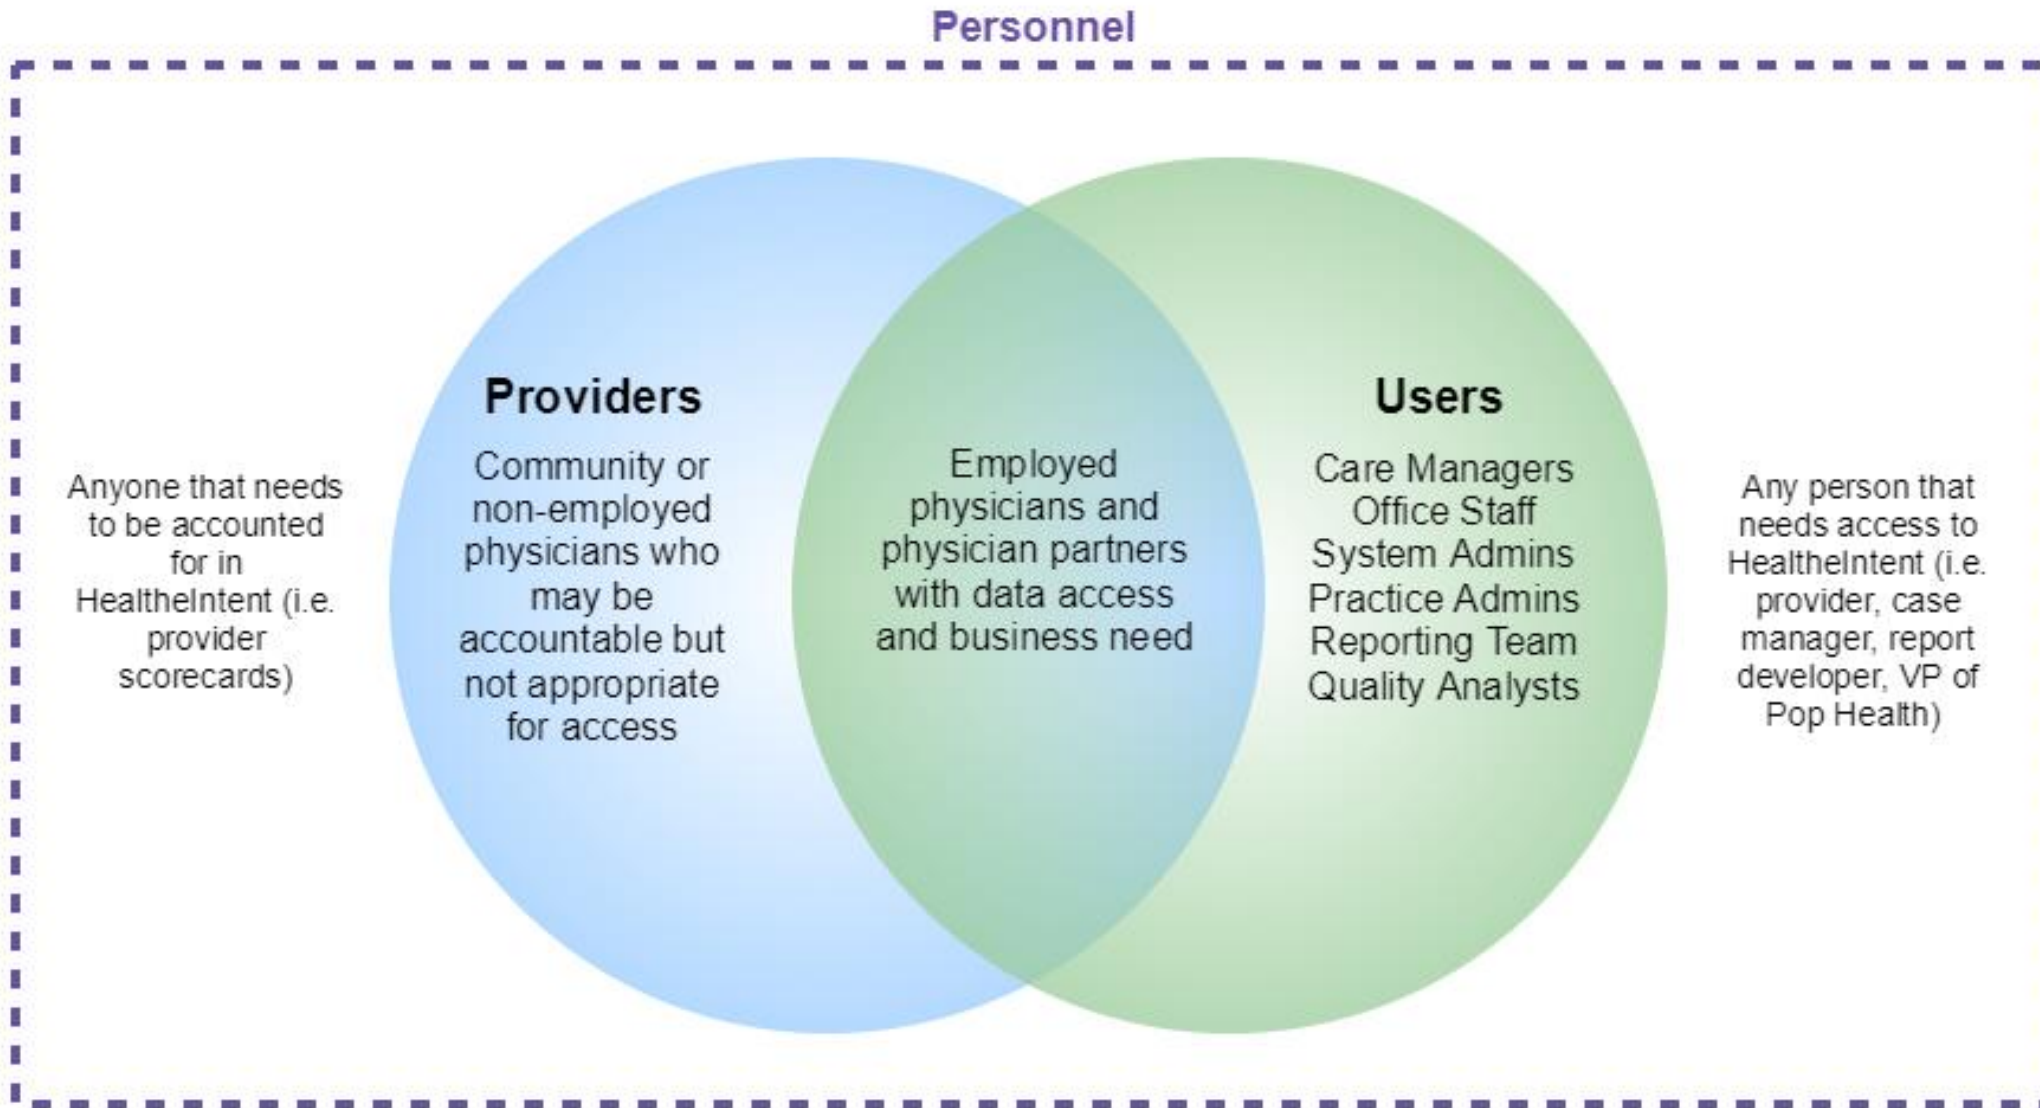

# Identity Management in *HealthIntent*

There are 2 pieces to this in the *HealthIntent* Platform:

1. *HealthIntent* needs to accept sign-on requests from Users during **authentication** process
2. Personnel and security data needs to be loaded to define **authorization**

# Who Are Your Personnel?

# Experiencing HealthIntent

---

- Organizations and Personnel Groups determine 2 things in HealthIntent:
  - Security
  - Platform processing and features, such as attribution and scorecards
- **Organizations** enable access to patient records, based upon administrator or member relationships
- **Personnel Groups**
  - **Whitelist** groups grant access to individual solutions
    - Examples: registries\_whitelist, analytics\_whitelist
  - **Administrator** groups provide access to all features and data
    - Examples: system\_administrators, registries\_administrators
  - **Solution** groups support specific functionality
    - Examples: attributable\_personnel, scorable\_personnel, analytics\_data\_authors

# Personnel Tool

---

- View and manage personnel authorization data in the HealthIntent platform for your organization
- Create, edit, and delete personnel members, personnel groups, organizations, and organization classes

<https://wiki.cerner.com/display/healthintentHPSV/HealthIntent+Personnel+Tool+Help>

# Personnel APIs

---

- Allows personnel, personnel group and organizations to be transmitted to Personnel Tool
  - Can control ability to edit within the Personnel Tool

<https://docs.healthintent.com/api/v1/personnel/>

# Accessing the Personnel APIs

---

- Request a System Account
  - Need a Cerner system account to make calls to Personnel APIs
  - Includes a bearer token and a set of OAuth credentials: consumer key and consumer secret
- Account Request: <https://cernercentral.com/system-accounts/>
  - Account Description - Client Name: Example Client; Platform/Service Name: HealthIntent APIs; Solution Name: Personnel Load; Cerner Contact: IdM Contact
  - Production System - Yes
  - Cerner Client - Yes
  - Millennium System - No
- CernerCare Account (required to request a system account): <https://cernercare.com/accounts/create>

# Personnel API Authentication

---

## Bearer Token

- Bearer token of system account
- The URL of the protected endpoint you wish to access

## OAuth 1.0a

- OAuth access token URL:  
<https://api.cerner.com/oauth/access>
- Your system account ID (consumer key)
- Your system account secret (consumer secret)
- The URL of the protected endpoint you wish to access

<https://docs.healthintent.com/#authentication>

# Structuring API Calls

## Ruby

```
require 'httparty'

HTTParty.get(
  'https://cernerdemo.api.us.healthintent.com/personnel/v1/personnel?formattedName=Dr&orderBy=givenName',
  headers: {
    'Content-Type' => 'application/json',
    'Authorization' => '<auth_header>'
  }
)
```

## Shell

```
curl -X GET -H 'Authorization: {auth_header}' -H 'Accept: application/json'
'https://cernerdemo.api.us.healthintent.com/personnel/v1/personnel?formattedName=Dr&orderBy=givenName'
```

# Structuring API Calls (Continued)

- GET
  - List and/or query resources
    - Retrieve a single personnel, group or organization
    - Retrieve a list of personnel, groups or organizations
    - Retrieve all valid personnel mnemonics
- POST
  - Create new resources
    - Create new personnel, group or organization
- PUT
  - Update resources
    - Update personnel, groups or organizations
    - Add personnel to groups (create personnel group members)
- DELETE
  - Delete resource
    - Deletions are permanent, even if the resource is added back with the same attributes, a new ID is generated
    - Any data tied to the old ID in downstream systems is orphaned
      - Remove personnel and personnel group members, groups or organizations

# Example API Flow – “New” User

---

1. GET by USER/SPI alias to see if they already exist
  - a) If exists, compare response against source, PUT to update if something is in source that isn't in response
  - b) If doesn't exist, POST
2. GET personnel group to see if user is already a member
  - a) If doesn't exist, PUT

# API Actions – Personnel

---

- Retrieve a List of Personnel
- Create a personnel
- Retrieve a Single Personnel
- Update a Personnel
- Remove a Personnel

# API Actions – Personnel Groups

---

- Retrieve a List of Personnel Groups
- Create a Personnel Group
- Retrieve a Single Personnel Group
- Update a Personnel Group
- Remove a Personnel Group
- Retrieve a List of Personnel Group Members.
- Add a Personnel Group Member
- Remove a Personnel Group Member
- Retrieve All Valid Mnemonics

# API Actions – Organizations

---

- Retrieve a List of Organizations
- Create an Organization
- Retrieve a Single Organization
- Update an Organization
- Remove an Organization
- Retrieve a List of Organization Administrators
- Add an Organization Administrator
- Remove an Organization Administrator
- Retrieve a List of Organization Members
- Add an Organization Member
- Remove an Organization Member

# API Actions – Documentation

---

- Personnel
- Personnel Groups
- Organizations

# Knowledge Check

---

You are contacted to add 3 new users to HealthIntent. What is your first step?

- A. Do a POST to create them
- B. Do a PUT to update them
- C. Do a GET to verify whether they already exist

# Knowledge Check

---

2 of the users existed but do not have all the memberships in the request. 1 user does not exist. What is your next step?

- A. Do a PUT to update and create all the users
- B. Do a PUT to update the 2 existing users with their additional info, and a POST to create the remaining user
- C. Do a DELETE to delete the existing users, and recreate them all using POST with all their information

# Knowledge Check

---

You receive a phone call saying a specific user needs their access revoked. What do you do?

- A. Ignore the request. Not your problem.
- B. Do a PUT to remove all Groups and Organizations from the user
- C. Do a DELETE to delete the user resource

# Knowledge Check: Extra Bonus Round

---

When creating users/groups/orgs and you receive the HealthIntent ID back as a part of the 201 - OK response, should you record/keep track of those Identifiers? Why or why not?
